

Some Examples of the Applications, Apex Triggers, Apex Classes and Visualforce Pages written by Peter J. Keane

Item	Type	Current Salesforce API Version	Purpose
AddLocationstoOpp	Apex Class	API v51	Apex Class allows the user to add up to 1000 location in an Account Hierarchy to a single Opportunity to allow for quoting multiple locations, with multiple services from multiple underlying providers of Telecommunication services.
AddLocationstoOpp	Visualforce Page	API v51	This page allows the user to associate multiple locations to a single Opportunity. In doing so they can add up to 1000 locations to generate Quote Requests from multiple Suppliers and for multiple services or products in differing quantities at each location.
AddProductWizard	Apex Class	API v50	<p>* Purpose: * - Provide enhanced Pricebook search capability using search terms and NPA/NXX codes * - Create one of, custom products without adding to the standard pricebook</p>
AddProductWizard	Visualforce Page	API v50	The Add a Product Wizard allows users to add unique products or services to Opportunity Products by either selecting items from within the Salesforce products or by creating a one-time-use-product that will be added only to this list of Opportunity Products but not to the Price Book.
AddResulttoOpp	Apex Class	API v51	<p>* Add TelCloud Quote Result to Opportunity Line Item Class: * Purpose: * - Provide method for users to select and add multiple TelCloud Quote Results to Opportunity Line Items * - Supports inputting Quantity for selected result directly on Visualforce page * - Supports segmenting results by location for multiple location opportunities</p>
AssociateOfferings	Apex Class	API v51	Associates Offerings such that one Offering is set as the Master Offering and one Offering is set as a Dependent Offering. When a Master Offering is selected in the Quote creation process the dependent Offering is automatically added to the Quote item selection screen on the Quote Visualforce screen. It can be included or not as desired by the user. However it is recommended to be used whenever there is a desire for adding "up-sale" and/or Required add-on items.
AssociateOfferingsHandler	Apex Class	API v51	Does the association of the Master and Dependent Offerings Junction items and applies them for inclusion on the Visualforce page.
CommissionsBatch	Apex Class	API v51	Runs by a scheduled Apex Job to update the related Visualforce section presented on the Opportunity layout.

CommissionsBatch	Visualforce Page	API v51	Executes the calculations and displays them on the Opportunity page layout VF section InternalOppCommSumm and PartnerOpCommSum.
CommissionsBatchController	Apex Class	API v50	* Purpose: * - Batch Controller for Commissions batch processing
CommissionsBatchschedule	Apex Class	API v50	Implements the schedule for Apex Job as defined by CommissionsBatch.
ConnectionHelper	Apex Class	API v50	Assists in establishing Connections with other Salesforce orgs using Salesforce to Salesforce (Connection Finder)
ConvertToAssets	Apex Class	API v51	Allows the user to convert Opportunity Product Line Items into Assets with related lists appending to Account and Opportunity records.
DeleteImportedCommissions	Apex Class	API v51	* Purpose: * - Mass delete already processed commission records from the Imported commissions custom object * - Minimize storage usage for processed records which have already been processed and imported into Opportunity Commissions custom object
DeleteImportedCommissions	Visualforce Page	API v51	Page used by related DeleteImportedCommissions Apex Class to remove Imported Commission records to reduce storage and prevent accidental duplication of Opportunity Commissions.
Future Use - Add Multiple Quo	Flow	Automatic	This will be enabled in the future. Until such time it should not be used.
ImportCommissions	Apex Class	API v51	
Import Commission Query Sup	Formula	N/A	Formula used to determine the correct value to use when querying the Opportunity in the import commissions process. Import_Commission_Query_Supplier_Value__c = :ic. Supplier_Name__c. Used by the ImportCommissions Apex Class to match the Supplier Name to the Imported Commission records when creating Opportunity Commissions. This determines whether the Supplier Name picklist is in use. If it is not then the value in the Supplier lookup field is used to match the Opportunity to the Imported Commissions record.
ImportCommissions	Visualforce Page	API v50	This page allows the imported commission records to be moved into Opportunity Commissions. In so doing calculations are completed and commissions are applied to the recipient at the correct rates.
ImportCommCSV	Visualforce Page	API v51	This page provides users the basic information concerning how to to import commission records from a CSV file into TelCloud Commissions using the Data Import Wizard, Data Loader, or other tools.

LocationController	Apex Class	API v51	<p>* Purpose: * - Provide functionality to send an Email related to Supplier contact, we are invoking RequestLocationTable Vf page from this controller to render vf page as Excel file</p>
multiRequestBuilder	Apex Class	API v51	<p>* Purpose: * - Provide method for users to create and configure Quote Product Requests to submit to the Users Supplier * - Supports Multiple Locations, Multiple Suppliers and Multiple Product Type Quoting * - Supports limiting suppliers to only authorized suppliers via TelCloud Quotes sharing</p>
MonthlySupplierComm	Apex Trigger	API v51	<p>* Purpose: * - Associates new Imported Commissions with existing Deposit Records. * - Trigger runs when new imported commissions records are created and matches them to the current deposit record.</p>
MonthlySupplierComm2	Apex Trigger	API v51	<p>* Purpose: * - Trigger runs when a new deposit record is created and finds all related import commissions records. It then associates them with the deposit record to reconcile deposits versus commissions reported.</p>
